

HOW OUR CATNIP GROW

Organics | Wellness | Joyful for your Pets

1. Catnip from Seed

Our Catnip grows from the seeds. It requires lots of cares and attention as much as your pets. We noticed that soaked water seed or non soaked seed would have no difference on the growth speed and germinate. Best is to plant seed on the egg container or seeding tray to start. When kept consistently moist, germination should take place within 5-10 days. It can be really tricky, we failed many seeds to growth!

2. Seed to foliage (10-20 days)

After 7 days our baby foliage catnip appearing on the soil surface with normally with 2 leaves to starts then will grow more stems and leaves.

You do not need to fertilize catnip.

3. Growth Catnip

When our catnips grow about 2cm height, it is time to transfer them to the pot. We place 3-4 stems per pot to give them some space.

4. Final production

Once our catnip growth about 5-10 cm, it is ready to transfer to our biodegradable pot packaging production and deliver to you.

The catnip generally can grow 3-4 foot.

Do you know the benefit of Catnip

- Organic, wellness and joyful plants for your pets
- Mosquito repellent for your garden and house
- Safe for your pets to play with, they will not get high!

HAPPY PETS, HAPPY OWNER!
